Subject: Hexanedioic Acid, DI-C7-C9 Branched and Linear Alkyl Ester

I was reviewing the PDF summary of these tests, and I find it very distasteful that in several portions when testing on rabbits was completed, the reports say 'no deaths were observed', however, it then talks about necropsy of the animal.

To Solutia Inc.:

What kind of rubbish is that? You killed the animals after subjecting them to chemical testing. That equals death! Your studies produce death and suffering in many animals.

You're not fooling anyone that actually reads the document. I am not literate in many medical and technical terms, however, it's obvious that you are trying to sugar coat an issue with one statement, then the very next statement shows the true intent of your actions. I don't suppose you would subject yourself, your loved ones, or your own pets to such horrible conditions and death, mmm?
